CNS585

Multimedia Messaging Terminal for Public Safety Notification, Messaging, and Caller ID with Call Waiting

The Model CNS585 provides fast and effective public notification in cooperation with Telcordia™ Technologies Community Notification Solutions. When a public safety message is received, the CNS585 sounds the standard Emergency Alert System (EAS) alarm and announces the nature of the emergency based on standard EAS codes. The VoiceAnnounce® feature is essential to the effective public notification during an emergency and overcomes barriers relating to age, language, mobility, and literacy. The CNS585 increases emergency condition awareness and reduces overall response time when time is critical.

The product features VoiceAnnounce® caller ID and call waiting ID, and visual and audible message waiting notifications, providing local exchange carriers with a unique and effective marketing opportunity for caller ID and other enhanced telecom and messaging services.

Features

- Public Safety Announcements based on standard Emergency Alert System (EAS) codes
- Standard EAS Attention Signal for Public Safety Messages
- Audible announcements for a variety of advanced messaging applications (news, weather, information)
- Caller ID and Call Waiting ID (Type 2)
- Caller ID Announcements by number or audible category
- Announces "number unknown" and "number blocked" for unknown and blocked calls
- Summary Screen shows current date & time, new calls, new messages
- Message and Call Review Log (10 Safety messages, 25 Informative messages, 99 calls)
- Auxiliary Alarm output port (2-position screw-less terminal block)
- Visual and audible message waiting indicator (FSK and stuttered dial tone compatible)
- Dial back
- Multifunction LEDs indicate alarm and messaging status
- Adjustable volume control (high, medium, low, off)
- Bi-lingual Display and Announcements (English and Spanish)
- Automatic memory backup
- Includes Batteries (4xAA) and AC Adapter (6VDC)
- Meets FCC, IC, UL, and CSA requirements

*US Patents 5,526,406 and 6,038,443. Other patents pending.
Licensed under US Patent No. 6,021,177. Other US and foreign patents pending.
Requires subscription to appropriate telecommunications services.*
